# Modernising Windows Workloads with AWS

Are your Windows applications running SQL Server? Licencing and platform costs seem high? Are you worried about security and reliability? **Have you considered AWS and Amazon Aurora?**

The AWS **Windows Modernisation Program** provides a clear pathway to modernise your Windows workloads, so that you can divert valuable resources onto innovating for your business.

We are here to help! That's why through Ubertas Consulting, a detailed assessment of your workload is **free.**

Do you know about Amazon Aurora?

Reduce Cost

Organisations are increasingly moving to cloud based, on-demand database services such as Amazon Aurora which provides the security, availability, and reliability of commercial databases at 1/10th the cost.

Increase Resilience

Amazon Aurora is a fully managed and supported service offering >99.99% availability for your database. Runing on AWS, it complies to stringent security and encryption standards to guarantee the security of your data.

Reduce Overheads

Organisations using Amazon Aurora are able to move away from traditional database management tasks. This enables them to focus on innovation rather than hardware provisioning, software patching, setup, configuration, and managing backups.

What's on offer to you?

Organisations can better understand their options through the **Modernisation Viability Assessment (MVA)**, a detailed analysis of your options, 100% funded by Amazon and Ubertas Consulting to ensure there is no cost to starting your journey.

Discovery

An assessment of the current Windows environment from both a technical and commercial perspective.
Recommendations for operating your workload on AWS with database migration to Amazon Aurora.

Architecture

An architectural representation of your current Windows environment operating on AWS in accordance with the AWS Well-Architected Framework covering security, performance, reliability, operations and cost efficiency.

Planning

Commercial options for an architecture running on AWS alongside a recommended migration path to deliver your modernisation journey. Execution of the modernisation plan will also attract AWS funding.
